Objective

Senior Software Engineer with 9.5+ years of experience in Microsoft technologies, specializing in .NET Framework, .NET Core, Microservices, and Entity Framework Core. Skilled in Azure Service Bus integration, Azure DevOps automation, and SQL Server database design and optimization. Experienced in Agile delivery and leading small engineering teams to build scalable, high-quality solutions.

Experience

November 2025 till date

Senior Engineer ArcelorMittal Global Business & Technologies Pvt. Ltd.

As a Senior Engineer working in an Agile environment, I am responsible for designing and maintaining microservices architectures built on .NET Core, with multiple loosely coupled APIs integrated through Azure Service Bus for reliable inter-API communication. My role focuses on the delivery module, where I oversee API maintenance, upgrades, and alignment with the latest Microsoft .NET Core technologies. I am actively involved in requirement analysis, solution design, and implementation, ensuring that business and technical objectives are met. Additionally, I perform unit testing and integration testing to validate seamless interaction across modules, while also mentoring and guiding small groups of engineers to uphold best practices in coding, testing, and Agile delivery.

January 2023 – October 2025

Senior Software Engineer CGI Information Systems and Management Consultants Pvt. Ltd.

As a Senior Engineer with a BFSI client specializing in daily banking solutions, I worked extensively with Microsoft technologies in a microservices-based architecture. My responsibilities included requirement analysis, solution design, and implementation, along with unit testing and integration testing to ensure seamless functionality across modules. I was part of the team responsible for maintaining and upgrading applications involved in card transaction management, ensuring reliability and compliance with industry standards. Additionally, I contributed to the modernization of legacy systems, driving upgrades and maintenance to align with evolving business needs and the latest .NET Core technologies.

December 2021 – January 2023

Senior Engineer Nagarro Enterprise Services Pvt. Ltd.

As a Senior Engineer with a BFSI client specializing in payment processing, I was part of a team responsible for transaction verification across multiple payment sources before releasing funds to the concerned parties. My key responsibilities included requirement analysis, maintaining and upgrading APIs built with Microsoft technologies, and ensuring their reliability through unit and integration testing. I contributed to enhancing system performance and stability by modernizing and supporting critical applications involved in payment verification. Working within Agile methodology and leveraging Azure DevOps boards, I collaborated with cross-functional teams to deliver secure, efficient, and scalable solutions that supported seamless financial transactions.

March 2017 – December 2021

Senior Software Engineer Mphasis Limited

I began my career working with a manufacturing client, developing applications using .NET Framework 4.8, MVC framework, and SQL Server for two years. Later, I transitioned to a BFSI client specializing in finance brokerage, where I contributed to building and maintaining microservices-based solutions. My responsibilities included requirement analysis, regular client interactions, solution upgrades, and implementation, along with unit and integration testing to ensure system reliability. As part of the account management team, I was responsible for account creation and account data management using .NET Core microservices and SQL Server, ensuring secure and efficient handling of financial data while supporting evolving business needs.

Education

August 2021 to June 2016

Bachelor of Engineering (Computer Science & Engineering)

R.G.P.V. Bhopal, M.P.

May 2012

HSC (PCM) 12th

C.B.S.E, Patna, Bihar

May 2009

SSC (10th)

C.B.S.E, Patna, Bihar

Skills

Programming

- C#

Frameworks

- Dot Net Core
- Entity Framework
- MS Test
- NUnit
- xUnit

Architecture

- Monolithic
- Microservices

Design

- SOLID
- Event Driven Design (Service Bus)
- Domain Driven Design
- REST

Interests

Looking forward to lead and mentor team of junior developers.
